

Packard's lomatium

Lomatium packardiae

Scientific Name: *Lomatium packardiae* Cronq.

Bibliographic Reference: Cronquist, 1992. Great Basin Natur. 52: 75.

Common Name: Packard's lomatium

Family (Common Name): Apiaceae or Umbelliferae (Carrot Family)

Synonyms: None

Idaho Native Plant Society Category: Global Priority 3

Natural Heritage Program Rank: S1

Distribution: Canyon and Owyhee counties, Idaho; Malheur and Lake counties, Oregon and Washoe and Humboldt counties, Nevada.

Habitat: Volcanic ash and rhyolite and rocky clay soils in the sagebrush zone, from 900-1300 m elevation.

Phenology: April through June.

Look-alikes: Prior to the naming of this species, herbarium specimens had been called *L. triternatum*, which has solitary or few stems or scapes from a simple or occasionally few-branched crown. Packard's lomatium also differs in having the ultimate segments of the leaves shorter with the larger ones only 1-3 cm long giving the leaves a different aspect.
