

ALTERNATIVE C

ALTERNATIVE CONCEPT

Under Alternative C, there would be emphasis on retention and enhancement of the Monument's primitive character, with minimal visitor facilities or services outside the Frontcountry Zone, and less intensive management to influence resource conditions. More acres would be allocated to the Pristine Zone as compared to the other alternatives. This alternative would emphasize "opportunities for solitude" and provide a more primitive setting for recreational, educational, and management activities. It would offer protection for geologic and cultural resources and features by limiting access and development.

The key components of Alternative C are as follows:

- Would have the largest acreage in the Pristine Zone and least acreage in the Passage Zone.
- Maintains the fewest miles of roads and least amount of road access to the edge of the lava flows.
- Limits the amount of interpretation activities and number of information signs within the expanded Monument.
- Relies on the least intrusive methods of resource management, including sagebrush steppe restoration.
- Includes an ACEC designation in North Laidlaw Park to provide special protective management for native plants.

MANAGEMENT ZONES

Figure 8 depicts the zones based on the agencies' best understanding of where the zone boundaries would be located under Alternative C. Figure 8 also shows the zone allocations that would occur under Alternative C.

Under Alternative C, the Frontcountry Zone would remain the same as under Alternative A (No Action Alternative), and the Passage Zone would be reduced, particularly in Laidlaw Park and along the Arco-Minidoka Road. The biggest change from Alternative A (No Action Alternative) would be the increase in Pristine Zone in Laidlaw Park and the vegetated portions of Wilderness Study Areas.

The reason for the increased Pristine Zone allocation in these areas under Alternative C is to provide

for a more primitive visitor experience and to de-emphasize facilities, services, and easy access, and to emphasize retention and enhancement of the Monument's primitive character.

With the expanded Pristine Zone areas, there would be less access to the edge of the lava flows and fewer maintained roads, resulting in more resource protection.

MANAGEMENT GUIDANCE FOR ALTERNATIVE C

Alternative C would incorporate all of the "Management Guidance Common to All" previously described, plus the alternative-specific guidance on pages 45 and 46.

Table 4 summarizes where the various types of roads that currently exist would fall within the management zones as they would be located under Alternative C. Road and trail classification is based on the inventoried condition and maintenance standards for roads and trails as of 2003. Because management zones are a prescription for desired future conditions, road classification would be expected to change over the life of the management plan to match the management zone prescription. Note that there is a decrease in Passage and Primitive zone road mileage and a corresponding increase in Pristine Zone road mileage compared to Alternative A (No Action Alternative). Many of the roads now located in the Pristine Zone could be closed to unauthorized motorized use or converted to Class I trails over the life of the Plan.

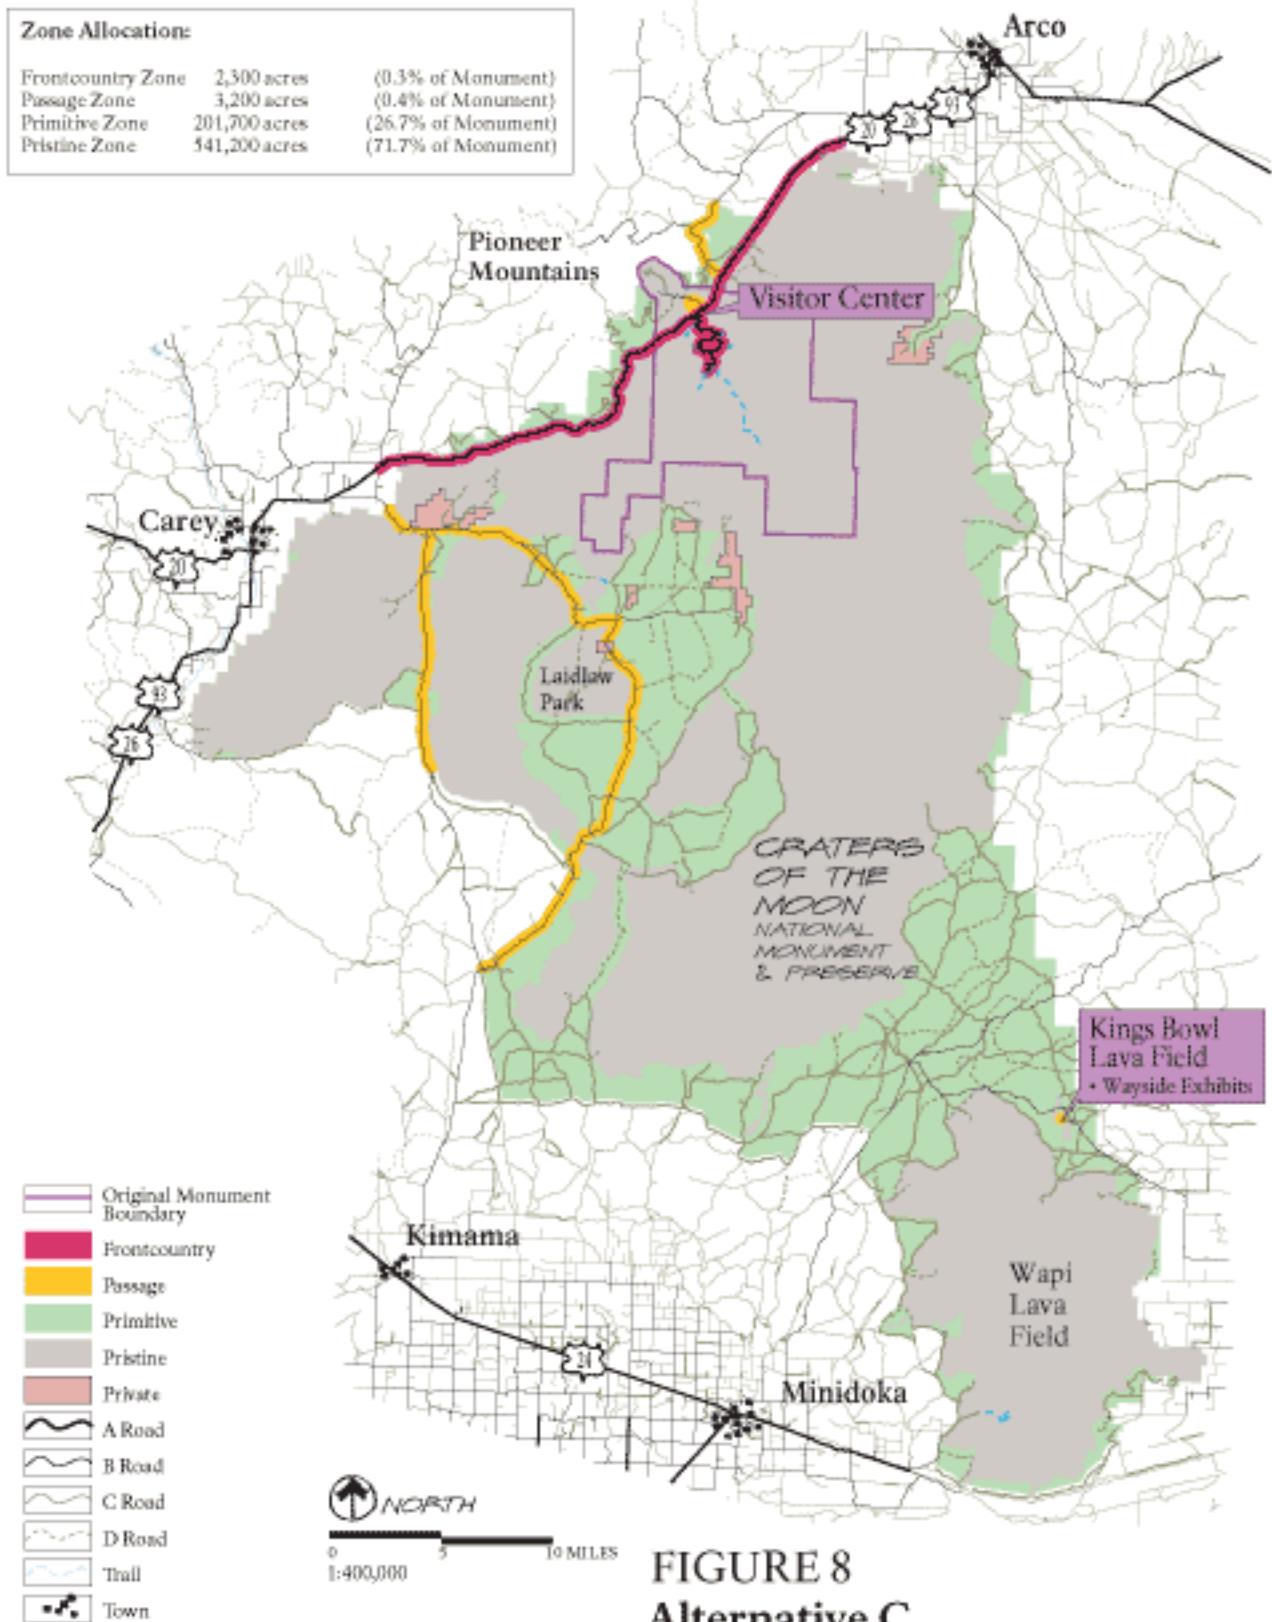

FIGURE 8
Alternative C

Craters of the Moon National Monument & Preserve
U.S. Department of the Interior / National Park Service

DSC • Feb 04 • 131 • 20,047

No warranty is made by the Bureau of Land Management or National Park Service for use of the data for purposes not intended by these agencies. Frontcountry and Passage Zone polygons have been over-simplified for graphic presentation and are not to scale.

GEOLOGICAL RESOURCES

Desired Future Conditions:

- Same as "Common to All."

Management Actions:

- A limited restoration program would be initiated to remove graffiti from caves and foster public understanding of the need for cave resource protection.
- Site development to facilitate access to caves would be limited to existing infrastructure and programs. Management of all other caves, including Crystal Ice Cave, would emphasize natural conditions.

VEGETATION, INCLUDING SPECIAL STATUS SPECIES, AND FIRE MANAGEMENT

Desired Future Conditions:

- Sagebrush steppe communities are protected and restored in Passage and Primitive zones.
- Greater continuity of habitat for special status species and general wildlife is emphasized.
- Fire is allowed to function as a natural process in the Wilderness and Preserve.

Management Actions:

- Approximately 55,000 acres (7 percent of the entire Monument, 20 percent of BLM-administered) would be identified for proactive restoration treatment and/or post-fire rehabilitation. Approximately 31,000 acres of annual grassland and 24,000 acres of highly degraded low elevation sagebrush steppe would be treated to control cheatgrass and restore big sagebrush cover with a perennial understory.
- Non-chemical methods of weed control would be emphasized, while not ruling out herbicide use.
- Less intensive treatment methods would be used for restoration and rehabilitation employing minimum tool constraints and "light handed" non-intrusive technology.
- Larger, more continuous acreages would be treated for restoration.
- Wildland fire use would be allowed in the Wilderness and Preserve except when incompatible with resource management objectives or danger to life or property.
- Limited prescribed fire (<500 acres) would be used in the aspen, conifer, and mountain shrub vegetation types to improve wildlife habitat and invigorate plant communities while protecting the Little Cottonwood Watershed.

CULTURAL RESOURCES

Desired Future Conditions:

- Same as "Common to All."

Management Actions:

- A minimum of 10 percent of the Monument would be intensively inventoried (Section 110 NHPA) for cultural resources over the life of the plan.
- The focus of the Section 110 inventory would be in the Primitive and Pristine zones.

ACCESS AND TRAVEL

Desired Future Conditions:

- The road and trail system within the planning area provides the visitor opportunities for challenge, risk, and adventure with limited improved access to destinations.
- Most management direction related to transportation and access is covered by management zone allocation (see Table 4).

Management Actions:

- All roads and ways within the Pristine Zone would be closed to all motorized and mechanized vehicle use except authorized emergency and administrative use.
- Many Class D roads in the Primitive Zone would be converted to non-motorized trails.

FACILITIES

Desired Future Conditions:

- Same as "Common to All."

Management Actions:

- Any new facilities would be limited to what may be necessary for public safety and/or resource protection.
- No new livestock developments would be permitted in the nominated North Laidlaw Park ACEC.

SPECIAL DESIGNATION AREAS (ACECs only)

Desired Future Conditions:

- The integrity of native plant community in the nominated North Laidlaw Park (north of E/W pasture fence) is maintained.

Management Actions:

- The nominated North Laidlaw Park (north of E/W pasture fence) would be designated as an ACEC.

INTERPRETATION / VISITOR UNDERSTANDING

Desired Future Conditions:

- A minimum of visitor services is provided except in the existing developed area of the north end visitor center and loop drive. This alternative provides the most opportunities for a self-discovery experience.

Management Actions:

- A variety of portable interpretive media (maps, tapes, guidebooks, etc.) would be developed to interpret the expanded portion of the Monument.

RECREATION

Desired Future Conditions:

- The public enjoys the most extensive opportunities of all the alternatives for self-discovery and primitive type recreation experiences.
- Unsigned and self-directed motorized recreation opportunities are available.

Management Actions:

- Implementation-level planning would make determinations as to where specific trails, trailhead facilities and/or number of primitive campsites would be needed or desired within the Passage Zone. Up to four locations would be developed for camping within the Passage Zone.

VISUAL RESOURCES

Desired Future Conditions:

- Same as "Common to All."

Management Actions:

- VRM inventory classes would be designated as management classes as shown on Figure 7.

Table 4
Alternative C – Road and Trail Inventory by Management Zone

Road Classification	MANAGEMENT ZONES*				Total Miles
	Frontcountry	Passage	Primitive	Pristine	
Class A	30	0	0	0	30
Class B	0	37	30	2	69
Class C	2	2	335	9	348
Class D	0	1	125	44	170
Class I Trails	7	0	0	13	20
Total Miles	39	40	490	68	637

Approximate miles of existing roads and trails within each zone rounded to the nearest whole number.

ALTERNATIVE D (PREFERRED ALTERNATIVE)

ALTERNATIVE CONCEPT

This alternative would emphasize aggressive restoration of the sagebrush steppe community lands, including noxious weed control and fire management. It proposes fewer acres in the Pristine Zone than Alternative C and less Frontcountry area than Alternative B. This alternative would target the most acreage for restoration and utilize aggressive management of weeds and fire to promote restoration of sagebrush steppe communities.

Commercial services (e.g., outfitters and guides), as well as off-site visitor opportunities, would be emphasized in this alternative. These commercial services would provide opportunities inside the Monument for visitors to experience and learn about the resources of the Monument. This would minimize the need for development and agency staffing within the Monument. This alternative would also encourage more off-site visitor experiences.

The key components of Alternative D (Preferred Alternative) are as follows:

- Promotes use of partnerships at off-site facilities such as visitor centers and state parks to provide Monument information and interpretation.
- Maintains a road network suitable for fire suppression and restoration activities within the Monument.
- Encourages outfitter and guide services in the expanded portion of the Monument, instead of new agency-provided services and facilities.
- Has the largest and most aggressive weed treatment and prevention program.
- Aggressively protects and restores sagebrush steppe communities.

MANAGEMENT ZONES

Figure 9 depicts the zones based on the agencies' best understanding of where the zone boundaries would be located under Alternative D (Preferred Alternative). Figure 9 also shows the zone allocations that would occur under Alternative D.

Under Alternative D, the Frontcountry Zone would remain the same as under Alternative A (No Action Alternative), and there would be an increase

in Passage Zone acreage, although not to the extent proposed under Alternative B. With the additional Passage Zone, there would be a slight reduction of Primitive Zone. This expanded Passage Zone would be allocated along primary or main linear road corridors, and not over larger contiguous areas as planned under Alternative B. The road system included in the Passage Zone would allow access for the aggressive restoration of physical and biological resources and would facilitate fire suppression, especially in Laidlaw Park.

Recreational uses would continue, but road maintenance in the Passage Zone would be limited to what is needed for fire or resource protection, as opposed to what is desirable for expanded or facilitated visitation. Alternative D's zone allocations were proposed as a means of achieving its aggressive resource protection and restoration goals.

MANAGEMENT GUIDANCE FOR ALTERNATIVE D

Alternative D (Preferred Alternative) would incorporate all of the "Management Guidance Common to All" previously described, plus the alternative-specific guidance on pages 49, 50, and 51.

Table 5 summarizes where the various types of roads that currently exist would fall within the management zones as they would be located under Alternative D. Road and trail classification is based on the inventoried condition and maintenance standards for roads and trails as of 2003. Note that there is an increase in Passage and Primitive zone road mileage and a corresponding decrease in Pristine Zone road mileage compared to Alternative A (No Action Alternative). This allows for Passage Zone roads to serve as access for resource management and protection and also allows for more Pristine Zone protection.

Zone Allocation:		
Frontcountry Zone	2,300 acres	(0.3% of Monument)
Passage Zone	9,900 acres	(1.3% of Monument)
Primitive Zone	283,700 acres	(37.6% of Monument)
Pristine Zone	452,500 acres	(59.9% of Monument)

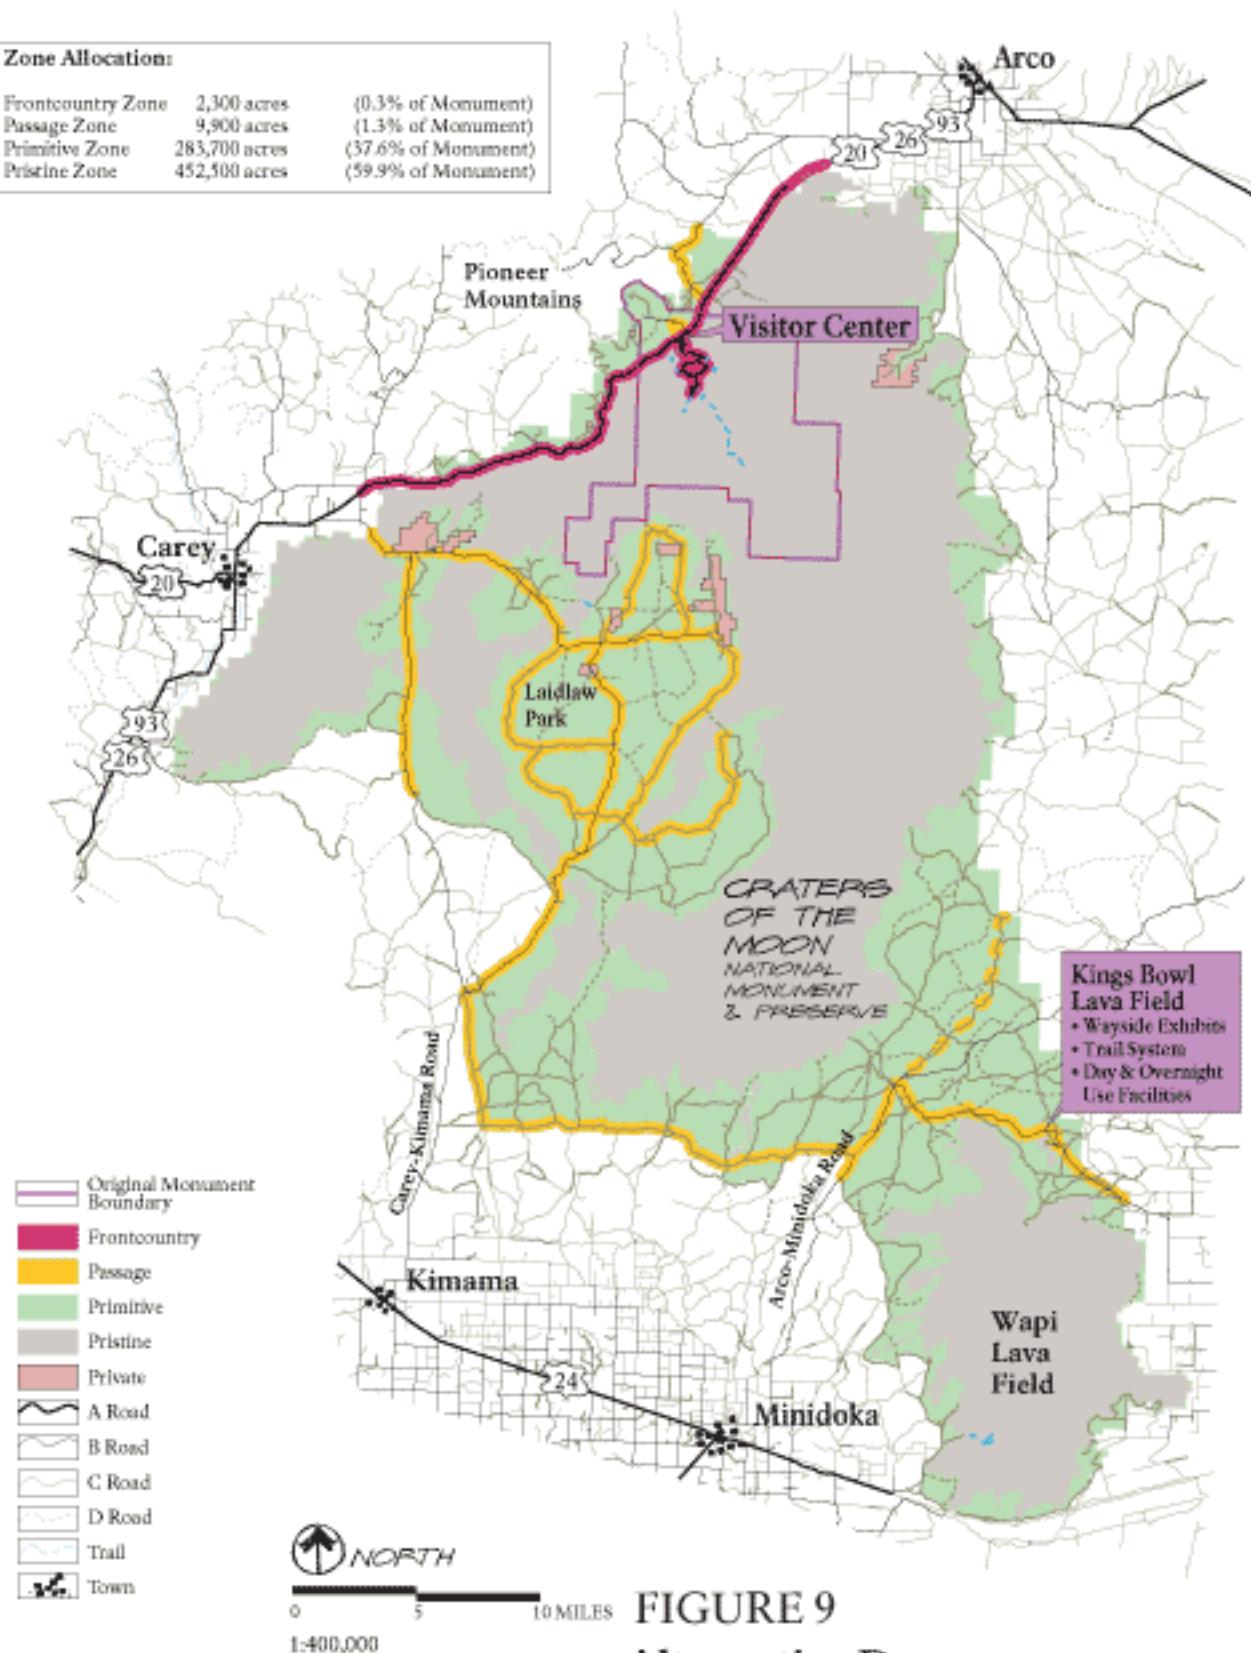

FIGURE 9
Alternative D

DSC • Feb 04 • 131 • 20,048

No warranty is made by the Bureau of Land Management or National Park Service for use of the data for purposes not intended by these agencies. Frontcountry and Passage Zone polygons have been rounded for graphic presentation and are not to scale.

GEOLOGICAL RESOURCES

Desired Future Conditions:

- Disturbed or degraded geologic features are identified and restored when feasible.

Management Actions:

- An intensive restoration program would be initiated to remove graffiti from caves and foster public understanding of the need for cave resource protection.
- Public access to caves and other geological features that are experiencing recreational use-related damage would be controlled, and damaged geological features would be restored as needed and when feasible.

VEGETATION, INCLUDING SPECIAL STATUS SPECIES, AND FIRE MANAGEMENT

Desired Future Conditions:

- Continuity of habitat for special status species and general wildlife will be emphasized.
- Fire is allowed to function as a natural process in the Wilderness and Preserve.
- The high ecological condition of the vegetation of North Laidlaw Park and Bowl Crater is maintained.

Management Actions:

- Approximately 80,000 acres (11 percent of the entire Monument, 29 percent of BLM-administered) have been identified within the Monument in need of proactive restoration and/or post-fire rehabilitation treatment, and these areas would be the focus of restoration actions. Approximately 31,000 acres of annual grassland and 49,000 acres of highly degraded low elevation sagebrush steppe would be treated to control cheatgrass and restore big sagebrush cover with a perennial understory.
- Aggressive protection and restoration of degraded areas within the Monument would be emphasized, and all the acreage currently identified for treatment would be restored as quickly as possible, perhaps within 10 years.
- Restoration projects would be prioritized relative to locations of key sage grouse habitats and population strongholds. Emphasis would be on projects that restore annual grasslands and degraded sagebrush steppe communities, as well as enlarging and connecting existing good condition habitats.
- Fire would be managed to maximize protection and restoration of sagebrush steppe in Passage and Primitive zones.
- Wildland fire use would be allowed in the Wilderness and Preserve except when incompatible with resource management objectives or danger to life or property.
- Limited prescribed fire (<500 acres) would be used in the aspen, conifer, and mountain shrub vegetation types to improve wildlife habitat and invigorate plant communities while protecting the Little Cottonwood Watershed.
- The road network would be managed to emphasize access for wildfire suppression and minimal response time.
- To protect vegetation resources, no new livestock developments would be permitted in North Laidlaw Park pasture and Bowl Crater allotment.

CULTURAL RESOURCES

Desired Future Conditions:

- Same as "Common to All."

Management Actions:

- A minimum of 10 percent of the Monument would be inventoried (Section 110 NHPA) for cultural resources over the life of the plan.
- The agencies would pursue more public education and interpretation off site, with increased monitoring and protection for those sites at risk.
- The focus of the Section 110 inventory would be in the Primitive and Passage zones.

ACCESS AND TRAVEL

Desired Future Conditions:

- The road system within the planning area emphasizes minimum response time for fire suppression activities.
- Most management direction related to transportation and access is covered by management zone allocation (see Table 5).

Management Actions:

- Existing Class B and C roads would remain open, but maintenance would be driven by natural resource management needs, primarily fire suppression, weed management, and restoration activities.
- Selected Class D roads in the Primitive and Pristine zones could be converted to trails or closed for resource protection.
- Allow for a Class B standard on the Arco-Minidoka Road through the Monument should the adjacent county governments choose to upgrade the roads outside the Monument.
- Temporary improvements to Class C and D roads could be authorized in the Passage and Primitive zones to facilitate fire suppression and restoration activities or other management actions aimed at natural resource protection.
- In cooperation with the counties, the agencies would upgrade the primary access roads to the Monument to provide better access for fire management.

Desired Future Conditions:

- Off-site facilities for new visitor services are emphasized.

Management Actions:

- Encourage partnership developing new visitor information facilities in gateway communities.
- Participate in multi-agency and private sector cooperative planning for a new South Central Idaho Visitor Center to be located along the Interstate 84 corridor.

INTERPRETATION / VISITOR UNDERSTANDING

Desired Future Conditions:

- Same as "Common to All."

Management Actions:

- Interpretive signs would be provided along the U.S. Highway 20/26/93 corridor.
- Informational/orientation materials dealing with recreation, maps, safety, and resource concerns would be available in gateway communities. A visitor center(s) operated in cooperation with local partners would be proposed within the I-84 corridor. Emphasis on providing new interpretive and educational materials and programs outside the expanded portion of the Monument and in partnering communities and facilities.
- Educational programs would be expanded to off-site locations.
- A variety of portable media (maps, tapes, guidebooks, etc.), would be developed to interpret the expanded portion of the Monument.
- Commercial outfitters and guides would be encouraged to offer a range of guided experiences. Visitors who might not otherwise have the proper knowledge, vehicles, or preparation to experience the interior of the Monument would then have a viable option that would not require a lot of the road, trail, and facility improvement associated with Alternative B.
- Interpretation of the expanded Monument, Preserve, and Wilderness would rely on publications, websites, and other off-site methods.
- Safety and resource protection would be emphasized at access points.

RECREATION

Desired Future Conditions:

- The public enjoys opportunities for self-discovery and primitive type recreation experiences.
- Unsigned and self-directed motorized recreation opportunities are available.

Management Actions:

- Implementation-level planning would make determinations as to where specific trails, trailhead facilities, and/or number of primitive campsites would be needed or desired within the Passage Zone. Up to six locations would be developed for camping within the Passage Zone.
- The agencies would emphasize outfitter and guide interpretive and outdoor recreation services within the Monument.

VISUAL RESOURCES

Desired Future Conditions:

- Same as "Common to All."

Management Actions:

- VRM inventory classes would be designated as management classes as shown on Figure 7.

Table 5
Alternative D – Road and Trail Inventory by Management Zone

Road Classification	MANAGEMENT ZONES*				Total Miles
	Frontcountry	Passage	Primitive	Pristine	
Class A	30	0	0	0	30
Class B	0	57	11	0	68
Class C	2	62	287	1	352
Class D	0	3	158	9	170
Class I Trails	7	0	0	13	20
Total Miles	39	12 2	456	23	634

*Approximate miles of existing roads and trails within each zone rounded to the nearest whole number.

ALTERNATIVES AND ACTIONS CONSIDERED BUT NOT ANALYZED IN DETAIL

The Council on Environmental Quality (CEQ) guidelines for implementing NEPA requires federal agencies to analyze all “reasonable” alternatives that substantially meet the purpose and need for the proposed action. The purpose of the Monument Management Plan (Plan/EIS) is to provide for management of the Craters of the Moon National Monument and Preserve within the provisions of the Proclamation, and to meet the requirements of Federal Land Policy and Management Act (FLPMA) and other laws and regulations. Because the Proclamation states that certain uses will not continue, and that other uses will continue consistent with federal laws and regulations, actions that do not comply with the Proclamation would not meet the purpose and need for the plan and are therefore were not included in alternatives that were analyzed in this Environmental Impact Statement (EIS).

The following specific alternatives, or actions that could be components of alternatives, were suggested but not analyzed:

NO LIVESTOCK GRAZING

During the summer of 2000, of the Secretary of the Interior published Consensus Management Points (May 19, 2000) stating:

“Sheep and cattle grazing will continue in the shrubstep of the Great Rift area to be managed by the Bureau of Land Management (BLM), including Laidlaw Park, consistent with the laws, regulations, and policies followed by the BLM in issuing and administering grazing permits or leases on all lands under its jurisdiction.”

Proclamation 7373 states: “Laws, regulations, and policies followed by the Bureau of Land Management in issuing and administering grazing permits or leases on all lands under the jurisdiction shall continue to apply with regard to the lands in the Monument administered by the Bureau of Land Management.” Based on this language, a “no livestock grazing” alternative would not meet the purpose and need and would not be consistent with the Proclamation. The BLM’s authority to manage grazing under existing laws, regulations, and policies would continue under all the alternatives considered. Lands available for grazing would be limited to

those under BLM authority and where BLM’s process allows grazing to continue.

NO HUNTING WITHIN THE MONUMENT

Comments supporting a ban on hunting within the Monument or limiting hunting to game species were expressed. Proclamation 7373 states: “Nothing in this proclamation shall be deemed to enlarge or diminish the jurisdiction of the State of Idaho with respect to fish and wildlife management,” as well as “...the National Park Service shall have primary management authority over the portion of the monument that includes the exposed lava flows, and shall manage the area under the same laws and regulations that apply to the current monument.” Hunting is prohibited under the NPS Organic Act and that act applied to the “current monument.” Therefore, hunting was prohibited within the NPS-administered portions of the expanded Monument until Public Law (PL) 107-213 (August 2002) designated the NPS-administered lands within the new areas of the Monument as a Preserve and directed the Secretary of the Interior to allow hunting within the Preserve. PL 107-213 provides that the Secretary of the Interior, after consultation with the State of Idaho, “may designate zones where, and establish periods when, no hunting may be permitted for reasons of public safety, protection of the area’s resources, administration, or public use and enjoyment”.

An alternative proposing zones within the Preserve closed to hunting was not analyzed in detail. However, it is expected in implementing this plan that the NPS will consult with the State of Idaho on options for closing the developed areas of Preserve lands to hunting for reasons of public safety. In addition to consulting with the State of Idaho, that process will require publication as a rulemaking in the *Federal Register* for public review and comment. While no specific circumstances were identified in the public scoping process, the area and timing of hunting activities could be modified in a like manner for the other purposes identified in PL 107-213 should such a need be identified in the future.

OTHER ALTERNATIVES

No comprehensive alternatives were submitted by outside interests, including state and local governments, tribes, or other interest groups.

SUMMARY OF ALTERNATIVES

Table 7, at the end of this chapter, contains a summary of the major features and management actions that would be associated with each of the four alternatives. The table shows actions that are common to all the alternatives, as well as the alternative-specific actions for each.

SUMMARY OF ENVIRONMENTAL CONSEQUENCES

Table 8, at the end of this chapter, contains a comparative summary of the key environmental consequences for each of the four alternatives. A detailed description of these impacts can be found in the Environmental Consequences chapter.

SELECTION OF THE PREFERRED ALTERNATIVE

To select the Preferred Alternative, all of the alternatives were evaluated with regard to the planning objectives and other criteria deemed important to the planning team. To minimize the influence of individual biases and opinions, a team used an objective analysis process called “Choosing by Advantages” (CBA). This process, which has been used extensively by government agencies and the private sector, evaluates the different alternatives by identifying and comparing the relative advantages of each according to a set of criteria.

One of the greatest strengths of the CBA process is the fundamental philosophy that decisions must be anchored in relevant facts and in the purpose and significance of the resources and lands involved. The CBA process asks which alternative gives the greatest advantages. To answer this question, relevant facts were used to determine the advantages the alternatives provide. To ensure a logical and traceable process, evaluation criteria were based on impact topics where there were differences in the alternatives.

The following categories were further broken down to better assess the alternatives. Alternatives were evaluated to see how well they:

- Protect Natural and Cultural Resources
 - Prevent loss of, or damage to, geologic resources
 - Restore degraded sagebrush steppe vegetation
 - Prevent introduction and spread of noxious weeds
 - Prevent loss of, and damage to, cultural resources

- Provide a Quality Visitor Experience
 - Availability of visitor facilities, interpretive programs and other visitor services
 - Variety of driving experiences
 - Opportunities for solitude and self-discovery
 - Availability of travel assistance (signage and maps)
 - Variety of non-motorized trails (hiking, pack stock, and bicycling)
- Protect Public Health, Safety, and Welfare
- Maintain and Enhance Relationships with Local Governments and Local Communities
 - Impacts on local government – emergency service providers (e.g., sheriff)
 - Fiscal impact on county facilities (e.g., roads)
 - Impacts on “grazing” permittees

In addition, the CBA Team considered but dismissed the following topics, since there were no substantial differences among the alternatives and the management actions were essentially the same for all:

- Air Quality
- Grazing
- Predator control
- Wilderness
- Opportunities for Research and Science

The next step was to assess and rank the alternatives based on the advantages they provided. The advantages were assessed by evaluating how well each alternative would meet (or not meet) the criteria listed above. Protecting natural and cultural resources was determined to be the most important evaluation criterion by the CBA Team.

Each alternative was assigned an “importance” value that reflected its rank; a higher importance value indicated that the alternative would meet more of the evaluation criteria and/or more of the ones deemed most important to the CBA Team.

Alternative D ranked the highest in advantages for the resources of the Monument. Major advantages of Alternative D identified during the CBA process included accelerated sagebrush steppe restoration and increased efforts to partner for interpretation and orientation information outside the Monument boundary.

Costs for each alternative versus the advantages provided were also compared and analyzed. These costs were developed for comparative purposes only. Because Plan/EIS costs are estimated well in advance of a project, the numbers will need to be re-examined and refined as BLM and NPS move forward with implementation planning. Costs identified in

the Plan/EIS are not intended to be used as a basis for funding until further analysis has been completed.

Comparative costs for the alternatives, as shown in Table 6, include initial development costs and annual operational costs. Initial development costs include labor and materials for construction of new facilities, annualized over the life of the plan (estimated as 15 years). For the purposes of cost estimating, general assumptions are made regarding amounts and sizes of development, and operations. Annual operational costs consider the annual costs of each alternative over the life of the plan (estimated as 15 years). For example, annual costs would include staffing required, costs of operating a building, ongoing rehabilitation and restoration projects, and replacement and maintenance costs of elements such as roadways in an alternative. Not included here under initial development costs is the possible federal shared cost for new facilities outside the Monument, such as a jointly operated visitor center within the I-84 corridor suggested under Alternative D.

Selection of the Preferred Alternative considers the advantages provided by each alternative (reflected in the importance scores), as compared to the costs of the alternative. Figure 10 summarizes the results of the CBA analysis.

Based on the CBA importance rankings and cost analyses, the CBA Team recommended Alternative D as the Preferred Alternative. Alternative D scored the highest in advantages (215 importance value) and was not the highest cost alternative. Alternative B had the highest cost and a lower importance value compared to Alternative D. Although Alternative C had a lower cost than Alternative D (\$450,000 less), it also had a substantially lower importance value. Alternative A (No Action Alternative) had a low cost, but a considerably lower importance value. Overall, Alternative D represented the best choice in that it provided high importance (many advantages) at a relatively reasonable cost.

Based on this analysis and recommendation of the CBA Team, the Idaho BLM State Director and the NPS Pacific West Regional Director selected Alternative D as the Preferred Alternative.

ENVIRONMENTALLY PREFERRED ALTERNATIVE

The Environmentally Preferred Alternative is defined as “the alternative that will promote the national environmental policy as expressed in §101 of the National Environmental Policy Act.” Section

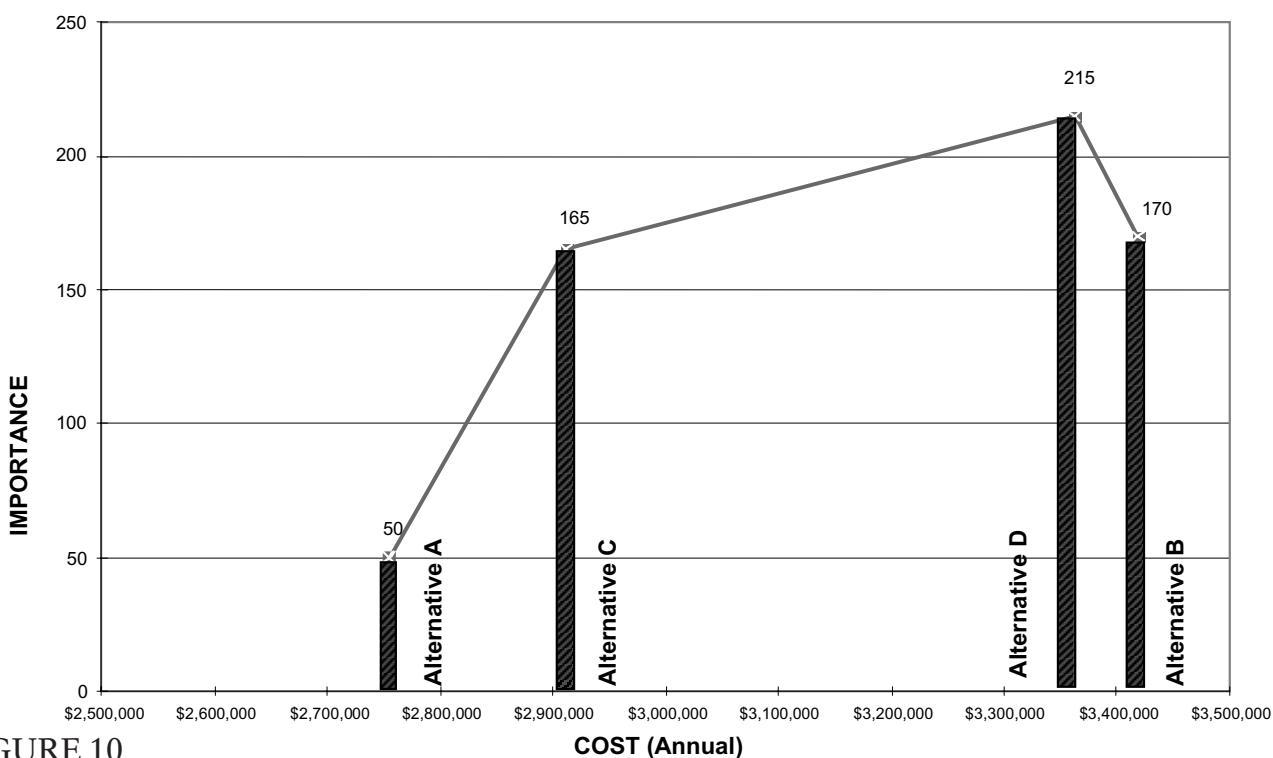

FIGURE 10
Management Plan Cost of Alternatives Compared to Importance (Advantages)

Table 6
Summary of Comparative Costs (FY 2003 dollars)

Alternative	Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alt.)
Annual Operating	\$2,754,000	\$3,389,000	\$2,906,000	\$3,352,000
Initial Development	\$0	\$30,000	\$6,000	\$9,000
Total	\$2,754,000	\$3,419,000	\$2,912,000	\$3,362,000

101 states "...it is the continuing responsibility of the federal government to..."

- Fulfill the responsibilities of each generation as trustee of the environment for succeeding generations.
- Ensure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings.
- Attain the widest range of beneficial uses of the environment without degradation, risk of health or safety, or other undesirable and unintended consequences.
- Preserve important historic, cultural, and natural aspects of our national heritage and maintain, wherever possible, an environment that supports diversity and variety of individual choice.
- Achieve a balance between population and resource use that will permit high standards of living and a wide sharing of life's amenities.
- Enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources."

In comparison with the other alternatives analyzed, Alternative D, also selected as the Preferred Alternative, best meets the national environmental goals identified above. Alternative D provides a high level of protection of natural and cultural resources, while providing for a wide range of beneficial uses of the environment.

Alternative D (Preferred Alternative) would enhance the ability of BLM and the NPS to achieve the purposes of the enabling laws and proclamations, as well as those goals outlined in Chapter 1 of this document. Alternatives A, B, and C lack the degree of management emphasis required to protect benchmark native vegetative communities and restore degraded sagebrush steppe habitat found in Alternative D. Substantial portions of the new Monument lands are currently in a degraded condition that can only be

improved with the scope of active restoration efforts provided for in Alternative D.

Alternative D (Preferred Alternative) would maintain most existing public facilities and access routes, but does not expand or substantially upgrade these. Alternative D allows for largely self-directed dispersed recreational use throughout most of the lands recently added to the Monument, while recognizing that site-specific use restrictions may be required in some areas to protect natural and cultural resources.

Goals related to public understanding and appreciation of the Monument resources would be achieved through existing on-site programs and facilities, as well as expanded programs and facilities located off site and through authorized licensed guide operations. Livestock grazing, a traditional land use on BLM lands prior to Monument expansion, would continue in all the alternatives considered with only minor changes.

MITIGATION MEASURES

The identification of mitigating measures is required by NPS in general management planning documents, as well as by the Council on Environmental Quality in its requirements for implementing the National Environmental Policy Act. These measures would be used to avoid or minimize potential impacts on natural and cultural resources on NPS lands from construction activities, use by visitors, and Monument operations. Similar actions would be taken on BLM lands to protect resources following the "Management Actions" previously described and the Planning Criteria (Appendix B).

Natural Resources

Geological Resources and Caves

Significant cave resources in the Monument would be identified and protected. Prior to any ground disturbing activity, areas would be surveyed for unique, rare, or special geologic resources, including fossils.

BLM would identify significant caves on federal land and restrict or regulate use according to the FCRPA of 1988. All caves on NPS-managed land are considered “significant” and in accordance with NPS policies and procedures would be protected to the greatest extent possible with current funding and staffing levels. Threats to unique or representative geologic resources would be identified and mitigated according to NPS and BLM management policies.

Soils and Water

Whenever possible, new development would be carried out on previously disturbed sites or in carefully selected sites with as small a footprint as possible. During design and construction, Monument staff would identify areas to be avoided.

Soil erosion and associated water quality impacts would be minimized by limiting the time that soil would be left exposed and by using various erosion control measures such as the placement of silt fencing, retention and replacement of topsoil, revegetation of sites with native species, and selective scheduling of construction activities. Conserving topsoil would minimize potential compaction and erosion of bare soil. The use of conserved topsoil would help preserve the microorganisms and seeds of native plants. Topsoil should be re-spread as close to the original location as possible and supplemented with scarification, mulching, seeding, and/or planting with species native to the immediate area. This would reduce construction scars and erosion. In an effort to control the spread of exotic plant species, only certified weed-free hay, straw, or mulch would be used.

All new construction would be completed using sustainable practices, such as the use of environmentally friendly materials and efficient utility systems. Components of such projects would be assessed for visual quality. Utilities and support functions such as water, sewer, electricity, and roads would be evaluated and designed to mitigate visual impact.

Vegetation and Fire Ecology

Monument staff would survey proposed development sites for sensitive species and would relocate new development if those populations were present. Similarly, trails roads, and campsites would be located to avoid impact on sensitive species. Salvaged vegetation, rather than new planting or seeding, would be used to the extent possible. Revegetation efforts would emulate the natural form, spacing,

abundance, and diversity of native plant species and would use native species whenever feasible.

To help minimize the spread of non-native plants, Monument managers would allow only the use of weed-free materials and equipment for operations. A variety of measures to prevent weed introduction and spread within the Monument would be implemented. These measures would include cleaning vehicles and equipment that may have been used in weed-infested areas prior to entry into the Monument and educational efforts aimed at staff, livestock permittees, visitors, and contractors.

Trails in the NPS-managed portion of the Monument would be monitored for signs of disturbance of native vegetation. To control potential impacts on plants from trail erosion or social trails, sustainable, low-impact barriers would be used, and disturbed areas would be revegetated with native plants. Also, interpretive signs would educate the public on the effects of soil erosion.

Inventory and monitoring of all natural resources would be undertaken to provide a comprehensive understanding of the Monument’s wildlife, vegetation, and habitat.

Wildlife and Special Status Species

A variety of techniques would be employed to reduce the impacts on wildlife, such as visitor education programs and restrictions on visitor activities. NPS, in conjunction with the State of Idaho, would designate areas within the Preserve and periods of time when no hunting would be permitted for reasons of public safety, protection of the areas’ resources, administration, or public use and enjoyment.

All special status species in the Monument and Preserve would be inventoried with monitoring plans established. Actions and stipulations necessary to protect special status species and their habitats would be made part of land use authorizations (e.g., limiting fragmentation of special status species populations when considering development of road network) and fire planning.

Air Quality

Dust control during construction activities would be required, and all construction machinery would be required to meet air emission standards.

Cultural Resources

In accordance with NPS policies and procedures, the NPS-managed portion of the Monument and

Preserve would continue to protect cultural resources to the greatest extent possible with current funding and staff levels. Disturbing significant resources would be avoided whenever possible. Where avoidance or preservation could not be achieved, mitigation would be carried out under the guidance of the procedures of the Advisory Council on Historic Preservation (36 Code of Federal Regulations [CFR] 800).

Before any land-modifying activity, a professional archaeologist would inspect the present ground surface of the proposed development site and the immediate vicinity for the presence of cultural remains, both prehistoric and historic. Should newly discovered or previously unrecorded cultural remains be located, additional investigations would be accomplished prior to earth-disturbing activities. Through consultation with the Idaho SHPO, areas for Section 110 cultural resource inventories would be prioritized. All sites eligible for the NRHP would be monitored for vandalism. A CRMP describing

how specific sites would be managed, defines what areas need additional inventory, and designates potential use categories for sites would be completed for the Monument. Should any Native American-affiliated NAGPRA materials be inadvertently discovered within the Monument, the agencies would follow the tribal consultation procedures outlined in the NAGPRA of 1990. All preservation, rehabilitation and restoration efforts for historic structures would be carried out in accordance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties, with Guidelines for Preserving, Rehabilitation, Restoring, and Reconstructing Historic Buildings*.

Contractors would coordinate with Monument staff to reduce disruption in normal Monument activities. Construction workers and supervisors would be informed about the special sensitivity of park values, regulations, and appropriate housekeeping.

Table 7
Summary of Alternatives

(*) COMMON TO ALL ALTERNATIVES	ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
GENERAL CONCEPTS	No major changes in resource management, visitor programs, or facilities.	Provide the opportunity for a broad array of visitor experiences within the Monument and perpetuate historic use patterns.	Retain and enhance the Monument's primitive character with minimal visitor facilities or services and less intensive management action to influence resource conditions.	Aggressively restore the sagebrush steppe communities, including noxious weed control and fire management, and promote partnerships at off-site facilities to provide Monument information and interpretation.
		ALLOCATION OF ZONES		
Frontcountry Zone Acreage (% of Monument)	2,300 acres (0.3%)	2,300 acres (0.3%)	2,300 acres (0.3%)	2,300 acres (0.3%)
Passage Zone Acreage (% of Monument)	4,800 acres (0.6%)	69,000 acres (9.1%) 9,000 acres Outside Monument	3,200 acres (0.4%)	9,900 acres (1.3%)
Primitive Zone Acreage (% of Monument)	291,100 acres (38.6%)	227,400 acres (30.1%)	201,700 acres (26.7%)	283,700 acres (37.6%)
Pristine Zone Acreage (% of Monument)	450,200 acres (59.6%)	449,500 acres (59.6%)	541,200 acres (71.7%)	452,500 acres (59.9%)
		NATURAL RESOURCES		
General	(*)	(*)	(*)	(*)
(*) Provide for and implement resource inventories, surveys, and monitoring programs; disseminate information to the public; mitigate threats to resources utilizing proactive management activities.				
Geological Resources	(*)	(*)	(*)	(*)
(*) Protect geological features from damage presently occurring; designate and implement resource inventories and monitoring strategies appropriate for resource protection; complete surveys prior to any surface disturbance; identify and mitigate threats to resources.				
Soils	(*)	(*)	(*)	(*)
(*) Protect soils from accelerated and unnatural erosion; investigate biological soil crusts to provide specific management guidance.				

(*)COMMON TO ALL ALTERNATIVES	ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
Vegetation, Including Special Status Species and Fire Management	<p>(*) Suppress wildland fire to protect life and property, recent rehabilitation, and restoration projects; develop a joint fire management plan; continue cooperative fire management arrangements.</p> <p>(*) Protect and restore sagebrush steppe communities; restore annual grasslands and highly degraded sagebrush steppe communities; emphasize use of native plants.</p>	<p>(*) Manage all wildland fires within the Preserve and BLM portion of the Monument according to current BLM land use plans. Manage wildland fire within the original Monument according to NPS Wildland Fire Management Plan.</p> <p>(*) Target 40,000 acres for restoration (5% of Monument; 15% of BLM land); assumes current rate of restoration – 2,500 to 4,000 acres/year.</p>	<p>(*) Take proactive fuel management activities to offset the potential effects of increased public use. Allow wildland fire use in the Wilderness and Preserve when compatible.</p> <p>(*) Limit prescribed fire to improve wildlife habitat and invigorate plant communities.</p>	<p>(*) Allow wildland fire use in the Wilderness and Preserve when compatible.</p> <p>(*) Limit prescribed fire to improve wildlife habitat and invigorate plant communities.</p> <p>(*) Limit prescribed fire to improve wildlife habitat and invigorate plant communities.</p> <p>(*) Manage the road network to emphasize access for wildfire suppression and minimal response time.</p>
	<p>(*) Rehabilitate wildland fire burned areas when necessary to restore native species and suppress noxious weeds; permit only certified weed free hay, straw, and mulch within the Monument; utilize Integrated Weed Management to control and prevent noxious weeds.</p>	<p>(*) Treat areas to control cheatgrass and restore sagebrush cover.</p>	<p>(*) Utilize Integrated Weed Management with emphasis on treatment/containment, prevention, and education, particularly in Frontcountry and Passage zones.</p>	<p>(*) Target 45,000 acres for restoration (6% of Monument; 16% of BLM land).</p> <p>(*) Target 55,000 acres for restoration (7% of Monument; 20% of BLM land).</p>
	<p>(*) Adopt interagency habitat guidelines for sage grouse and sagebrush steppe obligates to guide sagebrush steppe management; inventory all special status species in the Monument; authorize actions and stipulations to protect special status species and their habitats</p>	<p>(*) Restore existing and potential sagebrush steppe communities within the Monument, emphasizing key sage grouse habitat in Laidlaw Park, Little Park, and Paddelford Flat.</p>	<p>(*) Create an opportunity for interpreting the decline of sagebrush steppe and efforts to restore this dwindling resource.</p>	<p>(*) Manage fire to maximize protection and restoration of sagebrush steppe in Passage and Primitive zones. Allow wildland fire use in the Wilderness and Preserve when compatible.</p> <p>(*) Limit prescribed fire to improve wildlife habitat and invigorate plant communities.</p> <p>(*) Manage the road network to emphasize access for wildfire suppression and minimal response time.</p> <p>(*) Target 80,000 acres for restoration (11% of Monument; 29% of BLM land).</p> <p>(*) Aggressively protect and restore areas as quickly as possible – possibly within 10 years.</p>
				<p>(*) Restore annual grasslands and degraded sagebrush steppe communities, while enlarging and connecting existing good condition habitats.</p> <p>(*) Prioritize restoration projects relative to key sage grouse habitats and population strongholds.</p> <p>(*) Protect vegetation resources by not permitting any new livestock developments in North Laidlaw Park pasture and Bowl Crat allotment.</p>

(*)(COMMON TO ALL ALTERNATIVES)		ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
Water Resources, Including Wetlands		(*)	(*)	(*)	(*)
(*) Maintain, restore, and enhance riparian areas and wetlands; no additional playas are modified or developed; work with appropriate authorities to obtain water resources needed for Monument purposes.					
Wildlife, Including Special Status Species		(*)	(*)	(*)	(*)
(*) Inventory and monitor target species; designate no hunting areas as needed for safety and protection of area resources; protect special status species in the Monument; work with various agencies to control predators and pests.					
Air Quality		(*)	(*)	(*)	(*)
(*) Work proactively with surrounding communities, land management agencies, and the Idaho Department of Environmental Quality to limit increases in particulate matter and sulfur dioxide throughout the Monument.					
CULTURAL RESOURCES					
Archaeological and Historic Resources		(*)	(*)	(*)	(*)
(*) Inventory, evaluate, and document cultural resources of known archaeological and historic resources; prioritize Section 110 inventories in consultation with the Idaho SHPO; complete a baseline research report of archaeological resources within the Monument; manage a Cultural Resource Management Plan that defines what areas need additional inventory.		Intensively inventory a minimum of 5 percent of the Monument for cultural resources.	Intensively inventory a minimum of 10 percent of the Monument for cultural resources; increase Section 110 inventory in the Passage Zone.	Intensively inventory a minimum of 10 percent of the Monument for cultural resources; focus Section 110 inventory in the Primitive and Pristine zones.	Intensively inventory a minimum of 10 percent of the Monument for cultural resources; focus Section 110 inventory in the Primitive and Passage zones.
(*) Proactively manage and protect cultural resources; monitor and stabilize at-risk NRHP-eligible sites found to be deteriorating and protect/stabilize as needed; continue hunting, gathering, and use of certain natural resources.		Continue some interpretation of archaeological and historic sites.	Emphasize public education and interpretation of cultural resources in response to increased access.	Monitor sites and implement protection measures at various recreation sites.	Pursue more public education and interpretation off site; increase monitoring and protection of at-risk sites.

(*) COMMON TO ALL ALTERNATIVES	ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)								
Museum Collections	<p>(*) Allow access to Monument collections for legitimate research and educational purposes; manage all resource management records directly associated with museum objects as museum property.</p>	<p>(*) Consult with interested tribes on a regular basis regarding the management of traditional cultural properties.</p> <p>Address NAGPRA materials as a component of a Cultural Resources Management Plan; follow NAGPRA procedures should any Native American-affiliated NAGPRA materials be discovered.</p> <p>Take measures to identify traditional cultural places of importance to preserve the integrity and use of these areas.</p>	<p>(*) AMERICAN INDIAN RIGHTS AND INTERESTS (RESOURCES, RESOURCE AND PUBLIC LAND VALUES, TREATY RIGHTS)</p>	<p>(*)</p> <p>(*)</p> <p>(*)</p>								
				<p>LAND USE AND TRANSPORTATION</p> <table border="1"> <thead> <tr> <th>Access and Travel</th> <th></th> </tr> </thead> <tbody> <tr> <td> <p>(*) Prepare a Comprehensive Travel Management Plan; prepare a travel map showing allowable uses; road and trail classifications; and standards and restrictions; prepare guidelines and procedures for emergency and administrative off-road travel.</p> </td><td> <p>(*)</p> <p>(*)</p> </td></tr> <tr> <td> <p>(*) Designate all roads and trails as "Limited" off-highway vehicle (OHV) use (i.e., allow OHV on these roads in a restricted manner: no OHV off roads); designate all land within the Monument other than designated roads and trails as "Closed" for OHV use; close and rehabilitate all routes established in WSAs not identified as "existing ways"; authorized NPS "Park roads" are open only to licensed vehicles.</p> </td><td> <p>(*)</p> <p>Legal roads prior to Proclamation 7373 remain open, but roads can be closed on a case-by-case basis to protect resources.</p> <p>Designate the Carey-Kimama and Arco-Minidoka roads as "Backcountry By-Ways" over their entire length outside the Monument.</p> <p>Designate multilane and single-use trail routes.</p> <p>Upgrade and maintain the Carey-Kimama and Arco-Minidoka roads to a consistent Class B standard, including portions outside the Monument.</p> </td></tr> <tr> <td></td><td> <p>(*) Existing Class B and C roads remain open, but maintenance driven by resource, fireweed control needs, and restoration activities.</p> <p>Select Class D roads in Primitive and Pristine zones could be converted to trails or closed for resource protection.</p> <p>Allow for a Class B standard on the Arco-Minidoka Road through the Monument.</p> </td></tr> </tbody> </table>	Access and Travel		<p>(*) Prepare a Comprehensive Travel Management Plan; prepare a travel map showing allowable uses; road and trail classifications; and standards and restrictions; prepare guidelines and procedures for emergency and administrative off-road travel.</p>	<p>(*)</p> <p>(*)</p>	<p>(*) Designate all roads and trails as "Limited" off-highway vehicle (OHV) use (i.e., allow OHV on these roads in a restricted manner: no OHV off roads); designate all land within the Monument other than designated roads and trails as "Closed" for OHV use; close and rehabilitate all routes established in WSAs not identified as "existing ways"; authorized NPS "Park roads" are open only to licensed vehicles.</p>	<p>(*)</p> <p>Legal roads prior to Proclamation 7373 remain open, but roads can be closed on a case-by-case basis to protect resources.</p> <p>Designate the Carey-Kimama and Arco-Minidoka roads as "Backcountry By-Ways" over their entire length outside the Monument.</p> <p>Designate multilane and single-use trail routes.</p> <p>Upgrade and maintain the Carey-Kimama and Arco-Minidoka roads to a consistent Class B standard, including portions outside the Monument.</p>		<p>(*) Existing Class B and C roads remain open, but maintenance driven by resource, fireweed control needs, and restoration activities.</p> <p>Select Class D roads in Primitive and Pristine zones could be converted to trails or closed for resource protection.</p> <p>Allow for a Class B standard on the Arco-Minidoka Road through the Monument.</p>
Access and Travel												
<p>(*) Prepare a Comprehensive Travel Management Plan; prepare a travel map showing allowable uses; road and trail classifications; and standards and restrictions; prepare guidelines and procedures for emergency and administrative off-road travel.</p>	<p>(*)</p> <p>(*)</p>											
<p>(*) Designate all roads and trails as "Limited" off-highway vehicle (OHV) use (i.e., allow OHV on these roads in a restricted manner: no OHV off roads); designate all land within the Monument other than designated roads and trails as "Closed" for OHV use; close and rehabilitate all routes established in WSAs not identified as "existing ways"; authorized NPS "Park roads" are open only to licensed vehicles.</p>	<p>(*)</p> <p>Legal roads prior to Proclamation 7373 remain open, but roads can be closed on a case-by-case basis to protect resources.</p> <p>Designate the Carey-Kimama and Arco-Minidoka roads as "Backcountry By-Ways" over their entire length outside the Monument.</p> <p>Designate multilane and single-use trail routes.</p> <p>Upgrade and maintain the Carey-Kimama and Arco-Minidoka roads to a consistent Class B standard, including portions outside the Monument.</p>											
	<p>(*) Existing Class B and C roads remain open, but maintenance driven by resource, fireweed control needs, and restoration activities.</p> <p>Select Class D roads in Primitive and Pristine zones could be converted to trails or closed for resource protection.</p> <p>Allow for a Class B standard on the Arco-Minidoka Road through the Monument.</p>											

(*)COMMON TO ALL ALTERNATIVES	ALTERNATIVE A (NO ACTION)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
Access and Travel (cont.)				
(*) No new motorized vehicle roads or trails will be developed in the Pristine Zone; individual roads and trails may be temporarily or permanently (NPS) closed to protect resources.	(*) New trails could be developed in certain areas; maintain or rehabilitate trails in the Kings Bowl area to prevent further resource damage.	(*) Improve a trail system at the Kings Bowl area and to additional points of interest.	(*) Close all road and ways within the Pristine Zone to all motorized and mechanized vehicle use except for emergency and administrative use.	(*) Authorize temporary improvements to Class C and D roads in the Passage and Primitive zones to facilitate management actions aimed at natural resource protection. Cooperate with the counties to provide better access for fire management.
Frontcountry road and trail mileage	33 miles	33 miles	33 miles	33 miles
Passage Zone road and trail mileage	61 miles	272 miles <i>(148 miles Outside Monument)</i>	40 miles	122 miles
Primitive Zone road and trail mileage	522 miles	309 miles	490 miles	456 miles
Pristine Zone road and trail mileage	16 miles	16 miles	68 miles	23 miles
Livestock Grazing	(*) Alter eight allotment boundaries to accurately reflect NPS/BLM boundary (no change in AUMs or acreage); 284,000 BLM acres available for livestock use, 5,000 BLM acres not available for livestock use, and 466,000 NPS acres not available for livestock use; 36,693 AUMs permitted. Continue using existing livestock developments in Primitive and Pristine zones; evaluate Brigham Point and Paderford Flat sheep trails across NPS land for future use.	(*)	(*)	(*)
OTHER LAND USES				
Facilities				
(*) Enlarge and reconstruct existing visitor center/administration building, as approved; evaluate sharing BLM/NPS facilities and staff; install previously approved signs and wayside exhibits at Kings Bowl.	(*)	(*)	(*)	(*)
(*) Include Monument information at BLM fire stations in Carey and Kimama.	(*) Maintain existing informational and directional kiosks located along and within the Monument	(*) Potential to increase visitor services for the Monument at Carey and Kimama Fire Stations.	(*)	(*) Plan with other agencies and the private sector for a new South Central Idaho Visitor Center to be located along the Interstate 84 corridor.
				(*) Encourage partnership developing new visitor information facilities in gateway communities.

(*)COMMON TO ALL ALTERNATIVES	ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
Facilities (cont.)	<p>(*) Modify existing paved road system and parking areas to address safety and maintenance concerns at NPS Visitor Center at the original Monument.</p> <p>(*) Provide visitor safety and information signs in the Kings Bowl area.</p>	<p>(*) Centralized office space for BLM and NPS staff would be considered.</p>	<p>(*) Limit any new facilities to what may be necessary for public safety and/or resource protection.</p> <p>No new livestock developments are permitted in the nominated North Laidlaw Park ACEC.</p> <p>Centralized office space for BLM and NPS staff would be considered.</p>	<p>(*) Centralized office space for BLM and NPS staff would be considered.</p>
Lands and Realty	<p>(*) Pursue acquisition or exchange of private inholdings within the Monument; pursue an exchange for state lands located in and near the Monument; use existing policies to guide action on applications for new discretionary land use authorizations.</p> <p>Inventory all rights of way, easements, land use permits, and other authorizations in effect as of the date of the Proclamation.</p>	<p>(*)</p>	<p>(*)</p>	<p>(*)</p>
Mineral Materials	<p>(*) Continue existing authorization for mineral sites within the Monument for the term of the authorization; no new material sites will be developed except for administrative purposes; provide information on BLM areas outside the Monument where casual collection is appropriate and permitted.</p> <p>Consult with Idaho Transportation Department (ITD) on relinquishment of three right-of-way grants for material sites along U.S. Highway 93.</p>	<p>(*)</p>	<p>(*)</p>	<p>(*)</p>

(*) COMMON TO ALL ALTERNATIVES	ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
Wilderness and Wilderness Study Areas	<p>(*) Develop a joint BLM/NPS Wilderness/WSA Plan; no additional water development or other habitat manipulations are undertaken to manage wildlife populations; continue aircraft surveillance and monitoring of wildlife population accordingly. Close and rehabilitate ways or travel routes within WSAs not identified during WSA inventories to motorized vehicles.</p> <p>Should those portions of the Great Rift Wilderness Study Area adjacent to the original Monument be designated as wilderness, designate the 660-foot strip of non-wilderness between the Craters of the Moon Wilderness boundary and the original Monument boundary as Wilderness.</p> <p>Should Congress designate any WSA as Wilderness, prepare a separate Wilderness Management Plan for that area; should Congress release any WSA from WSA status, manage the area under the direction of this land use plan.</p>	<p>(*)</p>	<p>(*)</p>	<p>(*)</p>
Areas of Critical Environmental Concern (ACECs)	<p>(*) Manage potential ACECs to preserve and enhance the resource values.</p>	<p>(*)</p>	<p>(*)</p>	<p>(*) Designate North Laidlaw Park as an ACEC.</p>
Interpretation/Visitor Understanding	<p>(*) Develop a Comprehensive Interpretive Plan; coordinate services to meet the needs of permittees, visitors, students, educators, interest groups, and the general public; encourage partnerships at existing facilities outside the Monument; promote visitor safety and resource protection.</p> <p>(*) Focus educational programs for schools on programs on site in the original NPS Monument.</p>	<p>(*)</p>	<p>(*)</p>	<p>(*) Encourage commercial outfitters and guides to offer a range of guided experiences. Emphasize safety and resource protection at access points.</p> <p>(*) Expand education programs to off-site locations</p>

(*) COMMON TO ALL ALTERNATIVES	ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
Interpretation/Visitor Understanding (cont.)				
(*) Continue developing a variety of interpretive media for on- and off-site use; continue interpretive programs and maintaining exhibits and wayfinders.	(*) Develop a variety of portable media to interpret the expanded portion of the Monument.	(*) Develop a variety of portable media to interpret the expanded portion of the Monument.	(*) Develop a variety of portable media to interpret the expanded portion of the Monument.	(*) Develop a variety of portable media to interpret the expanded portion of the Monument.
(*) Post informational/orientation materials at all primary backcountry access points surrounding the Monument and at proposed fire stations at Carey and Kimama.	(*) Upgrade interpretive kiosks, wayside exhibits, and associated trail system and day-use area in the Kings Bowl area.	(*) Provide additional interpretive facilities along the U.S. Highway 20/26/93 corridor and at significant sites within the Passage Zone.	(*) Provide additional interpretive facilities along the U.S. Highway 20/26/93 corridor and at significant sites within the Passage Zone.	(*) Interpretation of the expanded Monument, Preserve, and Wilderness will rely on publications, web sites, and other off-site methods.
(*) Provide developed facilities such as the visitor center at the original NPS Monument.				(*) Interpretation of the expanded Monument, Preserve, and Wilderness will rely on publications, web sites, and other off-site methods.
Recreation				
(*) Utilize Idaho State Comprehensive Outdoor Recreation and Tourism Plan (SCORTP) and Outdoor Recreation Demand Assessment in implementation-level planning to assist managers in understanding the recreational use patterns, trends, and recreation facilities needed.	(*) Keep existing roads open to motorized and mechanical vehicle travel in the Pristine Zone.	(*) Make implementation-level planning determinations as to where specific trails, trailhead facilities, and/or number of primitive campsites would be located in the P Passage Zone; develop up to 12 locations for camping in the P Passage Zone.	(*) Make implementation-level planning determinations as to where specific trails, trailhead facilities, and/or number of primitive campsites would be located in the P Passage Zone; develop up to 12 locations for camping in the P Passage Zone.	(*) Make implementation-level planning determinations as to where specific trails, trailhead facilities, and/or number of primitive campsites would be located in the Passage Zone; develop up to 6 locations for camping in the Passage Zone.
Require permits for overnight camping in the Wilderness and/or biking or hiking in the original Monument area north of U.S. Highway 20/26/93; no wood fire are permitted within the original Monument.				(*) Make implementation-level planning determinations as to where specific trails, trailhead facilities, and/or number of primitive campsites would be located in the Passage Zone; develop up to 4 locations for camping in the Passage Zone.

(*) COMMON TO ALL ALTERNATIVES		ALTERNATIVE A (NO ACTION ALTERNATIVE)	ALTERNATIVE B	ALTERNATIVE C	ALTERNATIVE D (PREFERRED ALTERNATIVE)
Recreation (cont.)					
(*) Inventory resources and areas most vulnerable to vandalism, theft, and/or recreation use impacts.	(*)				
Designate areas within the Monument and periods of time when no hunting and/or use of firearms for reasons of public safety, administration, and/or public use and enjoyment.					
(*) Promote Leave No Trace and Tread Lightly! Programs with staff and the public; provide information/orientation materials.	(*)				
Visual Resources					
(*) Monument managers seek cooperation of visitors, neighbors, and local governments to prevent or minimize impacts to Western landscape vistas and natural dark conditions.		(*) VRM classification – currently 3 Class IV, 2 Class II; Wilderness – Class I.	(*) Wilderness and WSAs are Class I; all other areas are Class II.	(*) Wilderness and WSAs are Class I; all other areas are Class II.	(*) Wilderness and WSAs are Class I; all other areas are Class II.
Soundscape					
(*) Coordinate with Dept. of Defense, FAA, and Idaho Dept. of Aeronautics to minimize aircraft noise impacts.	(*)				
No aircraft landings associated with commercial air tours are authorized in Pristine Zones (emergency air strips are state managed and are not included in this guidance).					
		SOCIAL AND ECONOMIC CONDITIONS			
(*) Consider developing intergovernmental coordinating group to ensure consistency with state and local plans.	(*)	(*)	(*)	(*)	(*)
(*) Require research and specimen collecting permits; emphasize the use of the Monument as an outdoor laboratory for understanding the Great Rift ecosystem; coordinate the review and approval of research applications to confirm adherence to applicable policies and compatibility with the purposes of the Monument. Facilitate the transfer of research information to the public.	(*)	(*) RESEARCH	(*)	(*)	(*)
Assist qualified researchers and educational institutions in conducting authorized studies or field classes as feasible.					

Table 8
Summary of Impacts

NATURAL RESOURCES	
Geological Resources Geological resources would be affected by continued visitor access via roads and trails, as well as by wind erosion, fire, fire suppression, and grazing. These impacts would be mainly direct and both short-term and long-term and would range from negligible to potentially major. Indirect impacts would result from deposition of dust and soils on geological features over time. The limitation on new mineral extraction sites would result in long-term indirect negligible beneficial effects on geological resources.	Alternative B would have the most improved road access and the greatest number of improved roads and additional trail designations, which would result in the largest increase in visitation and/or access of all the alternatives. As a consequence, Alternative B could result in a slightly greater loss of geologic features or structures and a higher rate of degradation of geological resources or damage from vandalism. Adverse impacts from increased access would range from negligible to potentially major, with specific concerns about direct major damage to features in the King's Bowl and Wapi Lava Field areas. Increased fire suppression and continued grazing could result in minor to moderate adverse impacts, and small beneficial effects would result from limits on new mineral extraction areas.
Soils Soil disturbance, erosion, and compaction would be the primary adverse impacts associated with most management actions under Alternative A. Wildland fire and suppression, restoration activities, road and trail maintenance and use, and livestock use are the management activities most likely to affect soils. Overall, short- and long-term adverse impacts on soils would be minor to moderate in intensity, with long-term moderate beneficial effects from the restoration program.	Improved road and trail access, development of recreation facilities, and increased visitor use of the Monument under Alternative B might increase the amount of soil area directly and indirectly affected. Additional construction of unpaved roads, trails, and day use areas and more extensive use of fire suppression would cause direct loss of soils locally, resulting in minor to moderate localized adverse impacts. Grazing also would cause minor to moderate adverse impacts. Overall, short- and long-term adverse impacts on soils from Alternative B would range from minor to moderate; the restoration program would result in long-term moderate beneficial effects.

Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alternative)
<p>Vegetation and Fire Management</p> <p>Alternative A would result in both short- and long-term negligible to moderate adverse impacts on vegetation from continued use and maintenance of roads and trails, plus illegal off-road use, spread of noxious weeds, fire suppression and fire, and continued grazing. Restoration activities and construction of facilities would cause short-term negligible to minor direct adverse impacts, but they would result in long-term indirect minor to major beneficial effects from vegetation restoration and public education that would accompany facility xeriscaping efforts.</p>	<p>Alternative B would result in a greater possibility of fragmentation, increased risk of noxious weed spread, and greater risk of human-caused fire, because of increased visitation and access and more road and trail maintenance. Effects on vegetation would be both short- and long-term, ranging from negligible to moderate, but they would be more widespread than in Alternative A. Facility development would cause some long-term negligible to minor negative impacts on vegetation, but increased public education (along with xeriscaping efforts) would result in minor to moderate long-term beneficial effects. Restoration acreage would be slightly greater than in Alternative A, with short-term minor adverse impacts and long-term moderate to major beneficial effects.</p>	<p>Alternative C would involve less opportunity for extensive visitor access, less access for fire suppression, less active management of noxious weeds, and a slower rate of restoration over a larger area than any other alternative. Adverse impacts on vegetation from access would be minor and limited, with few impacts from facility development and native maintenance. Restoration and native xeriscaping efforts would cause long-term minor to major beneficial effects, but these would occur more slowly because fewer herbicides and low-impact methods would be used. Fires, fire suppression, and continued grazing would lead to minor to moderate long-term adverse impacts.</p>	<p>In Alternative D there would be more access for fire suppression and more aggressive noxious weed control and restoration programs, which would result in short-term minor to moderate adverse impacts but long-term moderate to major beneficial effects, occurring in a shorter time than in the other alternatives. Strategically placed restoration projects would increase the size and continuity of healthy vegetation patches and reduce the extent of poor quality vegetation. Adverse impacts from visitor access, fire and fire suppression, grazing, and facility development would be similar to those in Alternative A, with both short- and long-term, minor to moderate adverse impacts.</p>
<p>Water Resources</p> <p>Under Alternative A, current local long-term effects on water resources would continue at intensity levels generally ranging from negligible to potentially major, but any major effects would be localized to small areas. The effects of intense recreational use on ice cave pools and effects from livestock watering on individual playas could create minor to moderate changes in nutrient concentrations, bacteria levels, and turbidity. The duration of effects would depend on the intensity of recreational use of each site. The effects would tend to be localized to individual water bodies, because no surface waters connect them. The overall effect of livestock use on playas would be widespread and long-term and could range from minor to potentially major, depending on the location.</p>	<p>The effects of Alternative B could be substantially the same as those of Alternative A, but with a somewhat higher likelihood of more indirect adverse effects on local ice caves and playas resulting from road improvements and more recreational use, plus possible increases in livestock developments. Impacts would generally range from negligible to potentially moderate, but they would be localized. Depending on the site-specific circumstances, the effects could be either short term or long term.</p>	<p>The effects of Alternative C could be a chance that recreational use could affect ice caves, and there could be limited impacts from grazing. However, moderate adverse impacts would potentially be less widespread or frequent because road access would be reduced.</p>	<p>The effects of Alternative D on water resources would be similar to those from Alternative A, with localized long-term effects at negligible to major intensities, depending on site location (proximity of ice caves to roads) or concentration of livestock. Implementing Alternative D could cause local long-term effects on water resources at intensity levels ranging from negligible to potentially major. Intense recreational use could affect ice cave pools, and livestock watering could affect individual playas, causing minor to moderate changes in nutrient concentrations, bacteria levels, and turbidity. The effects would tend to be localized to the individual water bodies because no surface waters connect them</p>

Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alternative)
<p>Wildlife Resources</p> <p>Under Alternative A (continue current conditions), effects on wildlife would continue to come primarily from conflicts with human uses of the Monument, including disturbance by people and vehicles and conflicts and competition with livestock use. Access and roads and associated visitor recreation would result in minor long-term adverse impacts, plus short-term moderate local adverse impacts on some species in high use areas.</p> <p>Sagebrush steppe restoration and weed management actions would cause some short-term minor adverse impacts, with minor to major beneficial effects over the long term, depending on the species involved. Fire and suppression of fire would benefit some species but adversely affect others. The 50 sensitive species, which use all major habitats in the Monument and have a variety of life histories, would experience the same range of impacts as other wildlife.</p> <p>The bald eagle and the gray wolf, which are listed as threatened and endangered, but both are peripheral species, and the impacts on them would be negligible to minor.</p>	<p>The impacts on wildlife from Alternative B would be largely the same as those from Alternative A, but the slight increase in acres that would be restored under Alternative B would result in a related increase in improved habitat for sagebrush steppe species, a long-term minor to major beneficial effect. There could be a modest increase in adverse impacts from traffic disturbance in the larger Passage Zone area and the potential for increased or improved access to motor vehicles in that zone, as well as the development of a visitor use area in Kings Bowl and multiuse trails. The effects on wildlife would vary from species to species, but most effects would be long-term, minor to moderate, and localized.</p>	<p>The impacts on wildlife from Alternative C would be largely the same as those from Alternative A; but 15,000 more acres would be restored under Alternative C, resulting in more improved habitat for sagebrush steppe species. There would be fewer adverse impacts from traffic disturbance because the Passage Zone would be smaller in Alternative C, and the Primitive Zone would be larger. These designations would include the potential for decreased access for motor vehicles and related recreational use overall, resulting in fewer direct and indirect adverse impacts on all wildlife species.</p>	<p>The effects on wildlife from Alternative D would be largely the same as those from Alternative A; but the acreage to be restored in this alternative would be double that of Alternative A, resulting in more improved habitat for sagebrush steppe species, a major long-term beneficial effect. Modest changes in the adverse impacts could result from increases in the Passage Zone roads for restoration and administration uses and in the potential for increased or improved access for motor vehicles in that zone.</p>
<p>Air Resources</p> <p>Prescribed fire, wildland fire, and fugitive dust from roads result in smoke or dust containing particles that adversely affect human health and air quality related values such as visibility. The effects on air quality from smoke and dust caused by the management activities of Alternative A typically would be short-term and local. The intensity of effects could range from negligible to moderate, depending on weather conditions and the location and size of fires. Most prescribed and wildland use fires would cause minor short-term effects. Fugitive dust from roads with current traffic use would produce short-term local effects of negligible to minor intensity. A substantial increase in traffic would be required to elevate this impact to the moderate levels.</p>	<p>The adverse effects on air quality that would result from Alternative B typically would be short term and limited to the local region. The intensity of effects would range from negligible to moderate, with most prescribed and wildland use fires having minor effects. Fugitive dust from roads with decreased traffic use and vehicle speeds would produce short-term local effects of negligible intensity.</p>	<p>The adverse effects on air quality that would result from Alternative C typically would be short term and limited to the local region. The intensity of effects would range from negligible to moderate, with most prescribed and wildland use fires causing minor effects. Fugitive dust from roads with current traffic use would produce short-term local effects of negligible intensity. The addition of non-Monument sources occurring during the same time period could produce more intense but still moderate effects throughout the Monument</p>	<p>The adverse effects on air quality that would result from Alternative D typically would be short term and limited to the local region. The intensity of effects would range from negligible to moderate, with most prescribed and wildland use fires causing minor effects. Fugitive dust from roads with current traffic use would produce short-term local effects of negligible intensity. The addition of non-Monument sources occurring during the same time period could produce more intense but still moderate effects throughout the Monument</p>

Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alternative)	
CULTURAL RESOURCES				
Alternative A would cause a negligible to minor adverse impact on maintaining the long-term integrity of most of the Monument's archaeological resources. The restoration program and fire suppression would result in a long-term moderate beneficial effect, but the initial restoration and suppression actions, grazing, and vehicle travel would result in short-term minor to moderate adverse impacts.	Alternative B, in which recreational opportunities and vehicle access would be emphasized, would result in a moderate adverse effect on maintaining the long-term integrity of most of the Monument's archaeological resources. The restoration program and fire suppression would result in a long-term moderate beneficial effect, but the initial restoration and suppression actions, grazing, and vehicle travel would result in short-term minor to moderate adverse impacts.	Alternative C, in which human and vehicle access into the Primitive and Pristine Zones would be minimized, would result in a minor beneficial effect on maintaining the long-term integrity of most of the Monument's archaeological resources. The restoration program, fire suppression, and restricted access all would contribute to long-term, minor to moderate beneficial effects, but the initial restoration and suppression actions, grazing, and limited vehicle traffic would result in short-term minor to moderate adverse impacts.	Alternative D, in which off-site interpretation, visitor services, and aggressive range restoration would be emphasized, would result in a moderate beneficial effect on maintaining the long-term integrity of most of the Monument's archaeological resources. Short-term minor to moderate adverse impacts would result from vehicle travel, initial restoration activities, suppression actions, and grazing.	
AMERICAN INDIAN RIGHTS AND INTERESTS				
Alternative A would result in a negligible to minor beneficial effect on maintaining the long-term integrity of ethnographic resources and traditional use areas in the Monument.	By emphasizing recreational activities and vehicle access, Alternative B would result in a minor to moderate adverse effect on maintaining the long-term integrity of ethnographic resources and traditional use areas in the Monument.	By minimizing the amount of human and vehicle traffic into the Primitive and Pristine Zones, Alternative C would result in a minor beneficial effect on maintaining the long-term integrity of the ethnographic resources and traditional use areas in the Monument, but by limiting vehicle access it could cause some hardship for elderly tribal members.	By emphasizing off-site interpretation, off-site visitor services, and range restoration, Alternative D would result in a minor to moderate beneficial effect on maintaining the long-term integrity of the ethnographic resources and traditional use areas in the Monument.	
LAND USE AND TRANSPORTATION				
Travel and Access	By emphasizing recreational opportunities and increased access, Alternative B would cause a long term minor to moderate adverse effect on road conditions in the Monument, but it also would lead to a long-term moderate beneficial effect on the availability of access and ease of travel to many locations in the Monument.	By closing more miles of road in the Monument, Alternative C would cause minor to moderate adverse impacts on access. Reduced vehicle traffic could result in minor beneficial effects on transportation safety, but there also might cause some impacts on travel safety from visitors using lower standard roads.	By emphasizing off-site interpretation, off-site visitor services, and long-term range restoration, Alternative D would lead to long-term minor beneficial effects on access and road conditions in the Monument.	
		Restoration activities and restrictions in the Pristine Zone under Alternative C could restrict or increase the costs associated with grazing, resulting in short- and long-term moderate adverse impacts on grazing, but larger Passage Zone areas and the development of good access could result in road improvement and facility development, which would cause short-term minor beneficial effects, but the potential increased recreational use of this area could cause minor to moderate adverse impacts. Alternative A would have the third largest Pristine Zone, which could restrict or increase the costs associated with grazing.	Alternative D would involve the largest acreage identified for restoration; this would cause short-term moderate adverse impacts on grazing operations, but the long-term effects would be beneficial. The use of an expanded Passage Zone for potential road improvement and facility development and potentially more recreational use would result in minor to moderate beneficial effects from increased access and more ability to create new facilities. The Pristine Zone could restrict or increase the costs associated with grazing, a moderate adverse impact.	
Livestock Grazing				
Restoration activities and restrictions in the Pristine Zone in Alternative A could restrict grazing operations and/or increase costs associated with grazing, resulting in short- and long-term minor to moderate adverse impacts. The use of the Passage Zone for potential road improvement and facility development would result in short- and long-term minor beneficial effects, but the potential increased recreational use of this area could cause minor to moderate adverse impacts. Alternative A would have the third largest Pristine Zone, which could restrict or increase the costs associated with grazing.				

Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alternative)
Other Land Uses Alternative A would result in negligible impacts on administrative facilities, realty, and minerals in the Monument.	Alternative B would cause negligible effects on realty and minerals in the Monument and a minor adverse impact on administrative facilities.	By minimizing the amount of human and vehicle traffic into the Primitive and Pristine zones, Alternative C would cause long-term minor beneficial effects on the Monument's administrative facilities, realty, and minerals.	Because of its emphasis on off-site interpretation and visitor services, Alternative D would result in negligible impacts on administrative facilities, realty, and minerals in the Monument.
Special Designation Areas The effects on the characteristics and purposes of special designation areas from Alternative A would be primarily negligible to minor and short term, but the effect of livestock use on natural conditions in WSAs could be moderate in some local areas where livestock concentrate, and vegetative structure would be altered for long periods (5+ years). Road system management and limited regulation of off-highway vehicle use could cause negligible to moderate indirect adverse effects through the spread of invasive weeds and the creation of unauthorized routes.	The effects on the characteristics and purposes of special designation areas from Alternative B would be primarily negligible to minor and short term, but the effect of livestock use on natural conditions in WSAs could be moderate in some local areas where livestock concentrate, and vegetative structure would be altered for long periods (5+ years). The lack of access and limited Passage Zone acreage could cause indirect adverse effects if grazing was expanded to certain areas, with potential indirect adverse effects through the spread of invasive weeds and the creation of unauthorized routes.	The adverse effect on the characteristics and purposes of special designation areas from Alternative C would be mostly negligible to minor and short term. The effect of livestock on natural conditions in WSAs could be moderate in some local areas where livestock concentrate, and vegetative structure would be altered for long periods (5+ years). The lack of access and limited Passage Zone acreage could cause indirect adverse effects if grazing was expanded to certain areas, with potential indirect adverse effects through the spread of invasive weeds and the creation of unauthorized routes.	The effect on the characteristics and purposes of special designation areas from Alternative D would be primarily short term and negligible, with a potential for more intense effects if restoration activities took place in or near any of the areas. The effect of livestock on natural conditions in WSAs could be moderate in some local areas where livestock concentrate, and vegetative structure would be altered for long periods (5+ years). Road system management and limited regulation of off-highway vehicle use could cause indirect adverse effects through the spread of invasive weeds and the creation of unauthorized routes.

Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alternative)
VISITOR EXPERIENCE			
Interpretation and Visitor Understanding Posting information at backcountry access points and fire stations, offering school programs at the original NPS Monument, offering interpretation of cultural resources, adding interpretive media, exhibits, and waysides, and modest development in the Kings Bowl area would cause long-term minor beneficial effects on interpretation, as would agency assistance to research and educational institutions. In addition, long-term major benefits would result from expanding the existing Visitor Center.	Upgrading the Carey-Kimama and Arco-Mindoka Roads, offering school programs at the original NPS Monument, interpreting cultural resources, adding interpretive media, programs, exhibits, and waysides, and developing portable interpretive media would result in long-term minor effects on interpretation, as would agencies assisting research and educational institutions, developing a cave restoration program, and interpreting sagebrush steppe restoration and integrated weed management. Short-term negligible adverse impacts would result from upgrading the Carey-Kimama and Arco-Mindoka Roads. Long-term moderate beneficial effects would result from adding interpretive facilities along US 20/26/93, at significant sites in the Passage Zone, and at Kings Bowl. Long-term major beneficial effects would result from expanding and developing new facilities at the existing Visitor Center.	Posting information at backcountry access points and fire stations, offering school programs at the original NPS Monument, developing portable interpretive media, and establishing a limited cave restoration program would result in long-term minor beneficial effects on interpretation. There would be cumulative effects from Cooperative Weed Management Area programs. Long-term major beneficial effects would result from expanding the existing Monument Visitor Center.	Long-term minor beneficial effects on interpretation would come from placing interpretive signs and information along the US 20/26/93 corridor and at access points, offering school programs (including off-site efforts) and off-site interpretation of cultural resources, posting interpretive media, programs, exhibits, and waysides, from developing portable off-site interpretive media, and from modest development in the Kings Bowl area. Agency assistance to research and educational institutions and an intensive cave restoration program also would cause long-term minor beneficial effects. Long-term moderate beneficial effects would come from placing interpretive materials, facilities, and programs outside the Monument, in gateway communities and at a visitor center along the I-84 corridor, as well as from offering commercially guided services in the Monument. Long-term major benefits would come from expanding the existing Visitor Center. Commercial guide services could cause long-term minor adverse impacts on people visiting the interior of the Monument without a guide.

Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alternative)
<p>Recreation and Public Safety</p> <p>Alternative A would result in a wide range of negligible to moderate adverse and beneficial effects on recreation and public safety, depending on the recreational experience desired.</p> <p>Acquiring private inholdings would result in long-term negligible to minor beneficial effects, as would greater protection of geological features in the expanded part of the Monument; safety emphasis through interpretation, restoring sagebrush steppe communities, developing and rehabilitating trails in the Kings Bowl area, developing or improving facilities, closing certain ways in Wilderness areas and WSAs, and authorizing commercial outfitters and guides. Short-term negligible adverse impacts would result from wildland fire use.</p> <p>Long-term moderate beneficial effects would result from greater protection of geological features in the original NPS Monument, from designating multiuse and single-use trails, and developing or improving facilities. There would be indirect long-term moderate benefits from restoring sagebrush steppe communities.</p> <p>Improving motorized access would result in long-term moderate beneficial effects on certain recreational experiences, but it also could result in long-term moderate adverse impacts on other recreational experiences.</p> <p>Long-term moderate beneficial effects would result from the availability of undeveloped and dispersed camping, but this also could result in minor long-term adverse effects on people who prefer more developed, dispersed camping.</p> <p>Ongoing livestock operations would result in long-term minor to moderate adverse impacts on certain recreational experiences, but this also could affect other recreational opportunities, resulting in long-term negligible to minor beneficial effects.</p>	<p>The added access available in Alternative B would contribute both beneficial and adverse effects, depending on the type of recreation desired.</p> <p>Acquiring private inholdings would result in long-term negligible to minor beneficial effects, as would greater protection of geological features in the expanded part of the Monument, safety emphasis through interpretation, restoring sagebrush steppe communities, limited facility developments and improvements, closing certain ways in Wilderness areas and WSAs, and authorizing commercial outfitters and guides. Short-term negligible to minor beneficial effects would result from temporary improvements to Class C and D roads that could accommodate certain authorized activities, as well as from wildland fire suppression. Short-term negligible adverse impacts would result from wildland fire use, and short-term negligible adverse impacts would result from wildland fire use.</p> <p>Long-term moderate beneficial effects would result from greater protection of geological features in the original NPS Monument, and there would be indirect long-term moderate benefits from restoring sagebrush steppe communities.</p> <p>Long-term minor beneficial effects on certain recreational experiences would come from converting many Class D roads to non-motorized trails, but such conversion also would affect other recreational experiences, causing long-term minor adverse impacts.</p> <p>Closing certain roads and ways in the Pristine Zone to motorized and mechanized vehicle travel would result in long-term moderate beneficial effects on certain recreational experiences, but long-term minor adverse impacts also would result from such closures, affecting other recreational experiences. These closures also would result in long-term moderate adverse impacts from reduced access.</p> <p>Long-term minor beneficial effects would result from the availability of undeveloped and dispersed camping, but this also could adversely affect people who prefer more developed, dispersed camping, resulting in long-term negligible to minor beneficial effects.</p>	<p>The restricted access of Alternative C would contribute both beneficial and adverse effects, depending on the type of recreation desired.</p> <p>Acquiring private inholdings would result in long-term negligible to minor beneficial effects, as would greater protection of geological features in the expanded part of the Monument, safety emphasis through interpretation, developing or improving facilities, and closing certain ways in Wilderness areas and WSAs.</p> <p>Short-term negligible to minor beneficial effects would result from temporary improvements to Class C and D roads that could accommodate certain authorized activities, as well as from wildland fire suppression. Short-term negligible adverse impacts would result from wildland fire use, and short-term negligible adverse impacts would result from aggressive rehabilitation.</p> <p>Long-term minor to moderate beneficial effects would result from authorizing commercial outfitters and guides, and long-term moderate beneficial effects would come from greater protection of geological features in the original NPS Monument and from restoring sagebrush steppe communities.</p> <p>Long-term minor beneficial effects on certain recreational experiences would result from closing Class D roads or converting them to non-motorized trails to trails in the Primitive and Pristine Zones, but such conversion also would affect other recreational experiences, causing long-term minor adverse impacts.</p> <p>Long-term moderate beneficial effects would result from the availability of undeveloped and dispersed camping, but this also could affect people who prefer more developed, dispersed camping, resulting in long-term minor adverse impacts.</p> <p>Ongoing livestock operations would result in long-term minor to moderate adverse impacts on certain recreational experiences, but this also could affect other recreational opportunities, resulting in long-term negligible to minor beneficial effects.</p>	<p>The added access available in Alternative D would contribute both beneficial and adverse effects, depending on the type of recreation desired.</p> <p>Acquiring private inholdings would result in long-term negligible to minor beneficial effects, as would greater protection of geological features in the expanded part of the Monument, safety emphasis through interpretation, developing or improving facilities, and closing certain ways in Wilderness areas and WSAs.</p> <p>Short-term negligible to minor beneficial effects would result from temporary improvements to Class C and D roads that could accommodate certain authorized activities, as well as from wildland fire suppression. Short-term negligible adverse impacts would result from wildland fire use, and short-term negligible adverse impacts would result from aggressive rehabilitation.</p> <p>Long-term minor to moderate beneficial effects would result from authorizing commercial outfitters and guides, and long-term moderate beneficial effects would come from greater protection of geological features in the original NPS Monument and from restoring sagebrush steppe communities.</p> <p>Long-term minor beneficial effects on certain recreational experiences would result from closing Class D roads or converting them to non-motorized trails to trails in the Primitive and Pristine Zones, but such conversion also would affect other recreational experiences, causing long-term minor adverse impacts.</p> <p>Long-term moderate beneficial effects would result from the availability of undeveloped and dispersed camping, but this also could affect people who prefer more developed, dispersed camping, resulting in long-term minor adverse impacts.</p> <p>Ongoing livestock operations would result in long-term minor to moderate adverse impacts on certain recreational experiences, but this also could affect other recreational opportunities, resulting in long-term negligible to minor beneficial effects.</p>

Alternative A (No Action Alternative)	Alternative B	Alternative C	Alternative D (Preferred Alternative)
<p>Visual Resources</p> <p>Long-term minor beneficial effects on visual resources would result from greater protection of geologic features, from restoring sagebrush steppe communities, and from holding surface disturbing activities to the VRM management class standards that apply in Alternative A.</p> <p>Artificial light sources would cause long-term negligible cumulative adverse impacts. Long-term minor adverse impacts would result from existing livestock facilities and, cumulatively, from communications sites during the day.</p> <p>Long- and short-term minor adverse impacts would result from the use of existing mineral material sites. Long-term moderate adverse impacts would result from communications sites at night.</p> <p>Class B road use would cause short-term minor adverse impacts, and short-term minor to moderate adverse impacts would result from the use of existing mineral material sites. Long-term moderate adverse impacts would result from the use of existing mineral material sites. Long-term minor adverse impacts would result from communications sites at night.</p> <p>Road upgrades would cause short-term minor cumulative adverse impacts, and short-term minor to moderate adverse impacts would result from Class B road use. Short-term minor to moderate adverse impacts would be caused by wildland fires and prescribed fires. Short-term negligible to moderate cumulative adverse impacts would result from outside sources of air pollution.</p>	<p>Long-term minor beneficial effects on visual resources would result from greater protection of geologic features; long-term minor to moderate beneficial effects would come from restoring sagebrush steppe communities; and long-term moderate beneficial effects would result from holding surface-disturbing activities to VRM management class standards that apply in Alternative C.</p> <p>Artificial light sources would cause long-term negligible cumulative adverse impacts. Long-term minor adverse impacts would result from existing livestock facilities and, cumulatively, from communications sites during the day.</p> <p>Long- and short-term minor adverse impacts would result from the use of existing mineral material sites.
